WORLD LIVESTOCK NUMBERS

Cattle

World cattle numbers increased 2 percent during 1974 to 1.34 billion head. This total is slightly smaller than the 2.3 percent increase of 1973. The reduction in growth is a result of larger slaughter during 1973. In the United States and the European Community, the rate of increase in numbers declined as slaughter increased.

In the other major West European importing countries and Japan, cattle numbers declined. Australia and New Zealand are major beef exporters but have very small domestic markets; therefore cattle numbers increased at a faster rate in 1974 than in the pervious year because of a virtually closed world beef market. In South America, the rate of increase in numbers slowed because of higher slaughter rates. In these countries the domestic market absorbed the surplus production.

Hogs

World hog numbers were practically unchanged in 1974 because high world grain prices encouraged heavy slaughter. France was the only EC country to show an increase in hog numbers. Most of the East European countries and the USSR also increased their hog numbers, but the rate of increase was down sharply.

Sheep

Sheep numbers in the major producing countries increased nearly 1 percent during 1974 to 1.01 billion head. This rate of increase was the same as in 1973. Australia was the only major wool and mutton producer to show an increase in numbers. Total world sheep numbers remained some 3.5 percent below the 1969 record. Slow improvement in wool prices and continued red meat surpluses are the major reasons for the slow growth in sheep numbers.

In the United States the average price per pound for wool fell from 82.7 cents in 1973 to 59.1 cents in 1974. Current U.S. prices are lower, but a turnaround is expected in 1975.

Goats

World goat numbers increased slightly in 1974 (up 0.5 percent) to 401 million head. Goat numbers have been increasing since 1970 and are now at record levels. Most of the growth in world goat numbers is in the developing countries.

Horses

Horse numbers declined in 1974 to a record low of 68.5 million head. Numbers are falling in most countries that have used horses as farm animals, but are estimated to be increasing in the United States, where they are mainly used for riding.

Outlook for 1975

The growth in cattle numbers, which slowed in 1974, is expected to decline further in 1975. Slaughter in the developed countries is expected to remain high. In south America, increased domestic demand will likely remove any excess beef from the market. Surpluses are likely to occur in some countries in Eastern Europe, such as Yugoslavia. Other countries, such as Poland, have potential growth in domestic consumption. Australia and New Zealand could have serious surpluses if weather conditions turn bad.

World hog numbers are expected to pick up by year's end because of lower feed prices.

Sheep numbers are expected to increase again in 1975 in response to favorable prices caused by domestic support activities of the Australian, New Zealand, and South African wool boards.
